

# Environmental Impact Report

Avoided manufacturing carbon (CO<sub>2</sub>e)

|                  |                      |
|------------------|----------------------|
| Prepared for     | Example Customer Ltd |
| Date             | 14 August 2026       |
| Order reference  | &mdash;              |
| Report type      | Fulfilment request   |
| Devices included | 3                    |

## 639.00 kg CO<sub>2</sub>e

total avoided manufacturing impact

### Impact by device type

| Device type | Count | Per unit (kg CO <sub>2</sub> e) | Subtotal (kg CO <sub>2</sub> e) |
|-------------|-------|---------------------------------|---------------------------------|
| LAPTOP      | 2     | 181.0                           | 362.0                           |
| DESKTOP     | 1     | 277.0                           | 277.0                           |

### Devices

| Inventory number | Serial number | Device type | kg CO <sub>2</sub> e |
|------------------|---------------|-------------|----------------------|
| 705010001        | SN-001        | LAPTOP      | 181.0                |
| 705010002        | SN-002        | LAPTOP      | 181.0                |
| 705010003        | SN-003        | DESKTOP     | 277.0                |

### Methodology

Impact values are manufacturing-phase global warming potential (GWP, kg CO<sub>2</sub>e) from Boavizta's terminal archetypes (generic data). Use-phase electricity and end-of-life are not included because a refurbished device has the same in-use footprint as a new device. Values are point estimates (no uncertainty range) and are not third-party verified.
